

Idling is fuelish

Idling creates fumes that can damage your health

Switch off engines for cleaner air

Air pollution and idling

Poor air quality is a major health concern, and the main source of pollution is road transport. Some vehicle journeys cannot be helped, but leaving your engine running when parked (idling) creates unnecessary pollution. Putting a stop to idling is a simple way we can all help to clean up the air that we breathe.

Vehicle Idling Action

Air Quality Champions in Bath and across the country are encouraging behaviour change in a positive way. They are asking drivers to switch off their engines when parked for more than a minute, to help improve local air quality.
